

2021 ENVIRONMENTAL PERFORMANCE COMMUNICATION TO INTERESTED PARTIES

Madrid, January 29th, 2021

As a business trend in environmental matters and sustainability, AUXITEC has the following commitments:

- ✓ Our projects include considerations of improvement or mitigation of the environmental impact, their authors consider a product life cycle perspective that they carry out.
- ✓ We reduce as much as possible the consumption of plastics, mainly in the dining room by providing workers with utensils of other alternative materials (for example: ceramics, glass, metal, etc).
- ✓ We collaborate with our suppliers in improving their processes to mitigate the environmental impacts associated with them, indicating operational action measures.
- ✓ We advise our clients on the environmental improvement of their projects, by incorporating alternative measures in technical solutions.
- ✓ We carry out environmental awareness campaigns through informational posters in our facilities (for example: proper use of air conditioning according to legal temperature limits).

In addition, AUXITEC has implemented an integrated management system based on ISO 9001: 2015 and ISO 14001: 2015 standards in which the life cycle of the products / services we provide is taken into account. This implies:

- ✓ Review of compliance with environmental legislation:
We apply a systematic (semi-annual) to update and evaluate the environmental legal requirements applicable to our company.
- ✓ Aspectos Environmental aspects and objectives:
AUXITEC annually carries out an identification and evaluation of environmental aspects associated with our activities.

This identification has been updated in January 2021, obtaining good results in the following field:

- **Electric power consumption**

The installation of photovoltaic panels in our facilities is established as a 2021 target. AUXITEC is committed to RENEWABLE ENERGIES and GREEN CONSUMPTION.

- ✓ Operational Control:

- We ensure the proper functioning and maintenance of our facilities and buildings through the appropriate operational control.
- We make a correct management of the generated waste.

- ✓ Internal Training

All new staff at AUXITEC receive specific training related to the environment through a Manual of Good Environmental Practices.

- ✓ Planning and response to environmental emergencies

Annually, and with the objective of validating the planning and response to environmental emergencies and ensuring their adequate knowledge by the workers, a practical simulation is carried out so that the staff knows firsthand how to act in case of environmental emergencies.

- ✓ Other Considerations:

- Internal environmental audits are planned and performed to ensure compliance with system requirements.
- If any type of environmental accident occurs, environmental emergency protocols will be implemented.

AUXITEC's Chairman

The company has information on its environmental performance available to interested parties. To request it, you must send an e-mail to the mail Calidad@auxitec.es indicating environmental data that are requested and the reason for which they are requested. In the shortest possible time, requests will be answered.
