

COMMUNICATION ENVIRONMENTAL PERFORMANCE 2023 TO INTERESTED PARTIES

Madrid, 31 January 2023

As a business trend in environmental and sustainability matters, AUXITEC has the following commitments:

- ✓ Our projects include considerations of improvement or mitigation of environmental impact, the authors of the projects consider a life cycle perspective of the product they carry out.
- ✓ We reduce the consumption of plastics as much as possible, mainly in the canteen, by providing our employees with utensils made of alternative materials (e.g. ceramic, glass, metal, etc.).
- ✓ We collaborate with our suppliers to improve their processes in order to mitigate the environmental impacts associated with them, indicating operational measures.
- ✓ We advise our clients on the environmental improvement of their projects, through the incorporation of alternative measures in the technical solutions.
- ✓ We carry out environmental awareness campaigns through informative posters in our facilities (for example: appropriate use of air conditioning according to legal temperature limits).

Furthermore, **AUXITEC** has implemented an integrated management system based on the ISO 9001:2015 and ISO 14001:2015 standards in which the life cycle of the products/services we provide is taken into account. This involves:

- ✓ Review of compliance with environmental legislation:
We apply a systematic (six-monthly) approach to update and assess the environmental legal requirements applicable to our company.
- ✓ Environmental aspects and objectives
AUXITEC carries out an annual identification and evaluation of environmental aspects associated with our activities.

This identification has been reviewed in January 2023, obtaining the following aspect with a significant result:

- **Electricity Consumption.**

The **target for 2023** is to replace 100% of fused fluorescent lamps with energy-saving LED fluorescent lamps in installations.

- ✓ Operational Control

- We ensure the proper operation and maintenance of our facilities and buildings through appropriate operational control.
- We carry out a correct management of the waste generated.

- ✓ Internal Training

All new staff at AUXITEC receive specific training related to the environment through a Manual of Good Environmental Practices.

- ✓ Environmental emergency planning and response

Every year, in order to validate the planning and response to environmental emergencies and to ensure that workers are adequately aware of them, a practical drill is carried out so that staff can learn first-hand how to act in the event of environmental emergencies.

- ✓ Other Considerations

- Internal environmental audits are planned and carried out to ensure compliance with system requirements.
- In the event of any kind of environmental accident, environmental emergency protocols will be put in place.

Auxitec's President

The company has information on its environmental performance available to interested parties upon request. To request this information, send an e-mail to calidad@auxitec.es indicating the environmental data requested and the reason for the request. A response will be given as soon as possible.
